DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of claims 1-4 in the reply filed on 6/26/2006 is acknowledged. The traversal is on the ground(s) that the search of one group necessarily encompasses the other claims. This is not found persuasive because claims 5-7 are directed to product claims and therefore the thin film can be produced by various other methods, those not encompassed by claim 1.

The requirement is still deemed proper and is therefore made FINAL.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to

Art Unit: 1762

be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-4 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4 of copending Application No. 11/194619. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-4 of application 11/194619 teach or make obvious all the limitations of the claimed invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 11-12735 by Yara et al, hereinafter Yara.

Claim 1: Yara discloses a method of producing a thin film using opposing electrodes by applying a pulse voltage to opposing electrodes under a pressure within the claimed range and under an atmosphere comprising a gaseous raw material including a carbon source to generate discharge plasma so that a thin film is formed on

Art Unit: 1762

a substrate. (see for example abstract, paragraphs 0008-0013, figures). The pulse has a duration within the range as claimed (0011).

Claim 2. The pulse voltage of Yara has a pulse rise time of 1000 nsec or shorter (0010).

Claim 3. The pulse voltage of Yara has a pulse fall time of 1000 nsec or shorter (0010).

Claim 4: The film deposited by Yara is diamond like carbon (0013).
